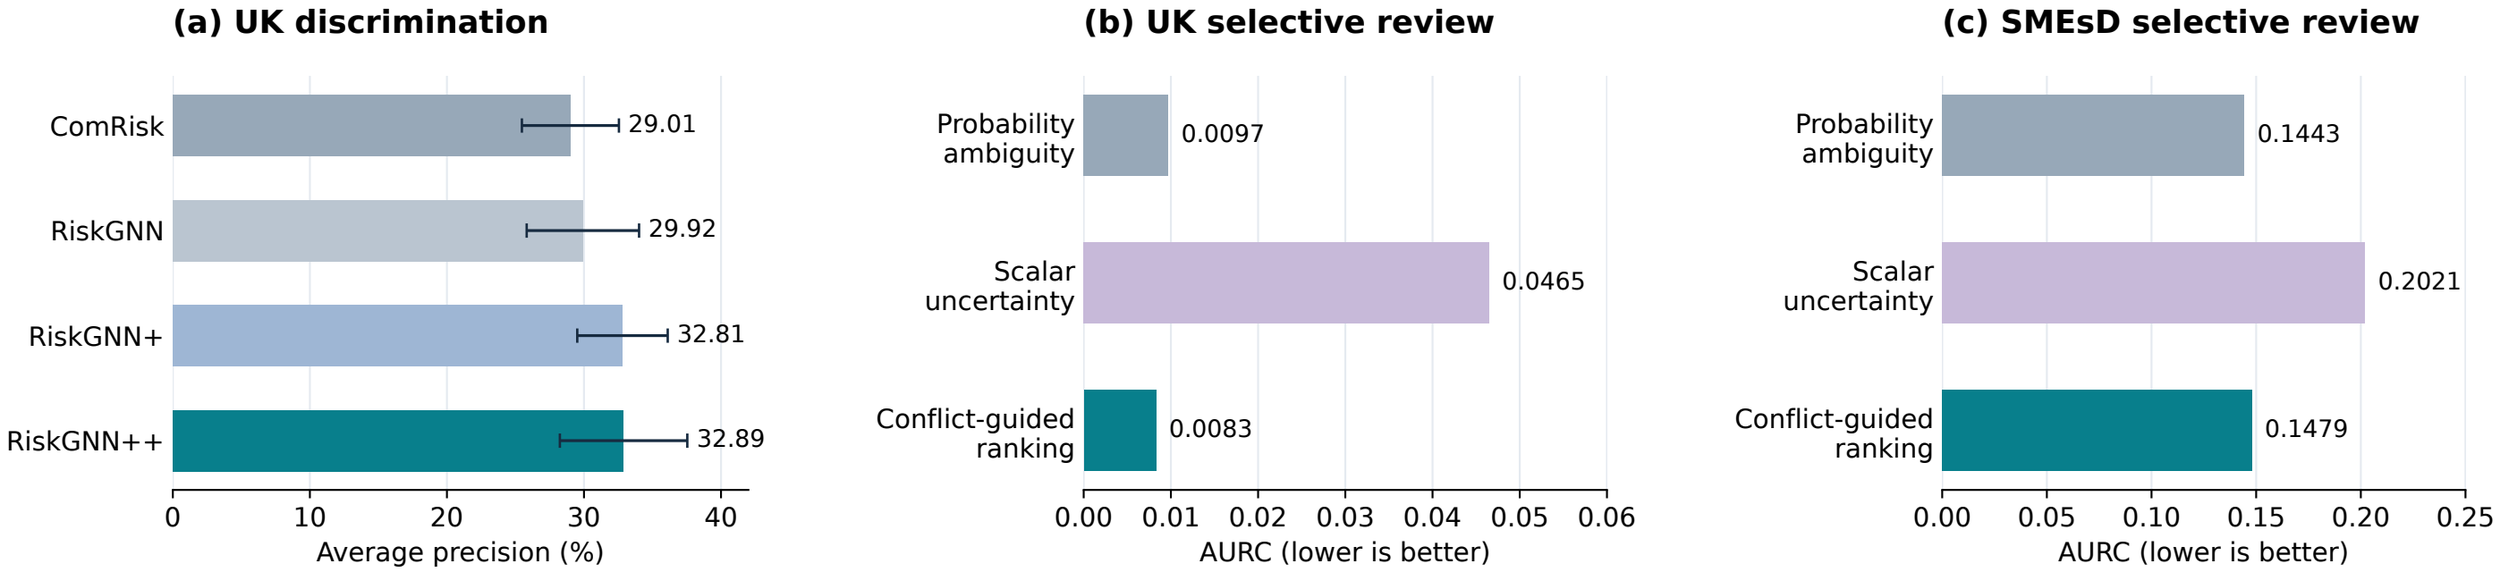
Existing results: discrimination and review gains are different claims

Completed ten-seed runs on fixed splits. No hypothetical results are plotted.



UK AP: +3.88 pp vs ComRisk (p = 0.027); +0.08 pp vs RiskGNN+ (p = 0.965). Error bars: sample SD across seeds.

UK AURC: conflict vs ambiguity p = 0.0023. At 70% automatic coverage: p = 0.2765 (no significant gain).

SMEsD AURC: conflict vs ambiguity p = 0.063 (no benefit). AURC bars show means only. All p values: paired t tests.
